

STEPPER MOTOR PINCH VALVE 2 WAY CONTROLLED VIA POTENTIOMETER

PROPORTIONAL

FLOW CONTROL

► GENERAL FEATURES

Stepper motor pinch valve, suitable to shut off media without producing neither turbulent flows, nor dead spaces. Particularly suitable for most of the analytical, medical and food applications. The "OPEN" and "CLOSE" positions of the valve will be set as indicated in the section "OPERATING INSTRUCTIONS". The system allows a bi-directional through flow and a high flow rate. The valve is suitable for elastic tubings with hardness up to 90 Shore A. The tubing (not included in our supply) is the only material in contact with the fluid.

ELECTRIC FEATURES

► MATERIALS (OF THE PINCHING DEVICE)

Ø30

► NOTE

* For use with different tubings, the min/max opening of the pinching device can be modified as indicated in the Maintenance Instructions. As an alternative, it is also possible to order the valves already programmed, with the desired strokes.

- Some data, e.g. actuating time and power absorption, are directly depending on the electronic control and can vary accordingly

- Valve position fixed on loss of power. "Fail Saving" function available on demand.

► CONNECTION

► OPERATION

When power is supplied, the valve will reset (red and green LEDs on) and will automatically move to OPEN position (red LED off). If the position of the potentiometer doesn't allow a complete opening of the valve (the yellow LED will be on, in addition to the red and green ones), adjust the potentiometer so as to have a complete opening.

1. Insert the tube in the respective slot

The valve is now operational and by providing the opening or closing pulse (minimum 10ms), the valve will act accordingly

LED signals meaning:

- Green LED on -> Valve open
- Yellow LED on -> Valve closed .

Note:

Valve position fixed on loss of power. When the power will be restored, the valve will reset (red and green LEDs on) and will automatically move to OPEN position (red LED off). If the potentiometer is not in complete opening position, the yellow LED will be on.

NB: With the open valve, it will be possible to adjust the opening degree according to your needs, by adjusting the potentiometer. *the opening degree is controlled by the position of the potentiometer.
